5 Installation from containers

Overview

This section describes how to deploy Zabbix with [Docker](#) or [Docker Compose](#).

Zabbix officially provides:

- Separate Docker images for each Zabbix component to run as portable and self-sufficient containers.
- Compose files for defining and running multi-container Zabbix components in Docker.

Attention: Since Zabbix 6.0, deterministic triggers need to be created during the installation. If binary logging is enabled for MySQL/MariaDB, this requires superuser privileges or setting the variable/configuration parameter `log_bin_trust_function_creators = 1`. See [Database creation scripts](#) for instructions how to set the variable.
 Note that if executing from a console, the variable will only be set temporarily and will be dropped when a Docker is restarted. In this case, keep your SQL service running, only stop zabbix-server service by running 'docker compose down zabbix-server' and then 'docker compose up -d zabbix-server'.
 Alternatively, you can set this variable in the configuration file.

Source files

Docker file sources are stored in the Zabbix [official repository](#) on GitHub, where you can follow latest file changes or fork the project to make your own images.

Docker

Zabbix provides images based on a variety of OS base images. To get the list of supported base operating system images for a specific Zabbix component, see the component's description in [Docker Hub](#). All Zabbix images are configured to rebuild latest images if base images are updated.

Installation

To get Zabbix component image, run:

```
docker pull zabbix/zabbix-server-mysql
```

Replace `zabbix/zabbix-server-mysql` with the name of the required docker repository.

INSTALL ZABBIX IN 5 MINUTES

Download and install Zabbix

- Choose your platform for Zabbix server
- Install and configure Zabbix server
 - Install Repository with PostgreSQL database
 - Install Zabbix server, frontend, web service, agent
 - Create initial database
 - Configure the database for Zabbix server
 - Start Web, Zabbix server and agent processes
- Configure Zabbix frontend
 - Connect to your newly installed Zabbix frontend: http://server_ip_or_name/zabbix
 - Follow steps described in Zabbix documentation: Installing frontend
- Start using Zabbix
 - See Quickstart guide in Zabbix manual

2

Installation process

INSTALL ZABBIX IN 5 MINUTES

```
› setenforce 0
› dnf install -y https://download.postgresql.org/pub/repos/yum/reporpms/EL-9-x86_64/pgdg-redhat-repo-latest.noarch.rpm
› dnf -qy module disable postgresql
› dnf install -y postgresql15-server
› /usr/pgsql-15/bin/postgresql-15-setup initdb
› systemctl enable postgresql-15 --now

› rpm -Uvh https://repo.zabbix.com/zabbix/6.5/centos/9/x86\_64/zabbix-release-6.5-2.el9.noarch.rpm
› dnf clean all
› dnf install zabbix-server-pgsql zabbix-web-pgsql zabbix-apache-conf zabbix-sql-scripts zabbix-agent zabbix-web-service
› cd /tmp
› sudo -u postgres createuser --pwprompt zabbix
› sudo -u postgres createdb -O zabbix zabbix
› zcat /usr/share/zabbix-sql-scripts/postgresql/server.sql.gz | sudo -u zabbix psql zabbix

› firewall-cmd --permanent --add-service=http
› firewall-cmd --permanent --add-port=10051/tcp
› firewall-cmd --reload
```

INSTALL ZABBIX IN 5 MINUTES

```
> tee /etc/yum.repos.d/timescale_timescaledb.repo <<EOL
> [timescale_timescaledb]

```

INSTALL ZABBIX IN 5 MINUTES

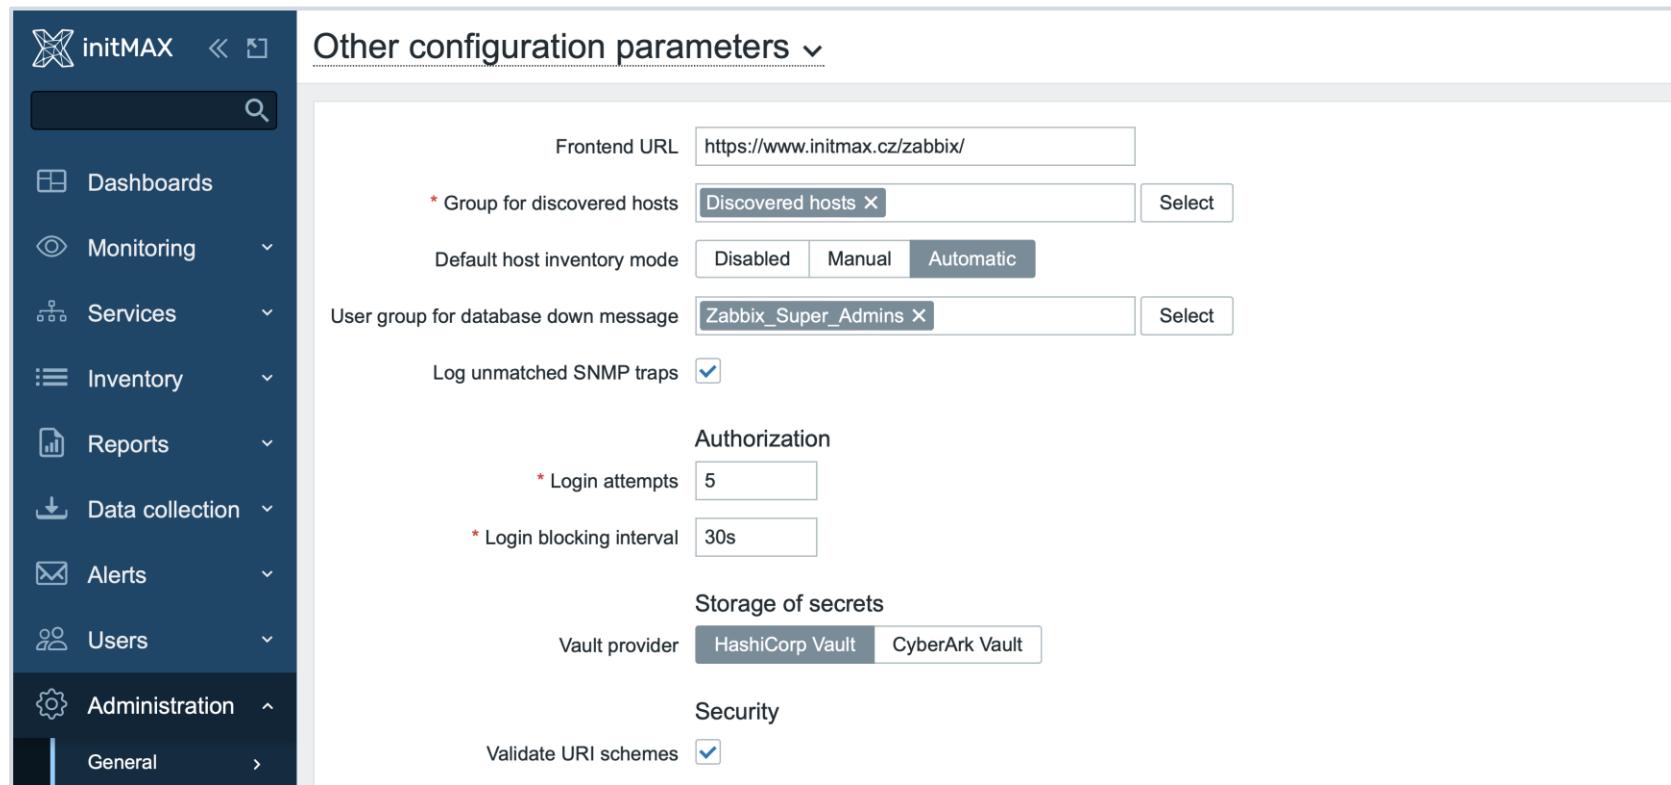

```
› nano /etc/zabbix/zabbix_server.conf  
› ...  
› DBPassword=password  
› StartReportWriters=1  
› WebServiceURL=http://localhost:10053/report  
› ...  
  
› dnf install glibc-langpack-cs.x86_64 glibc-langpack-sk.x86_64  
› systemctl restart zabbix-server zabbix-web-service zabbix-agent httpd php-fpm  
› systemctl enable zabbix-server zabbix-web-service zabbix-agent httpd php-fpm  
› less /var/log/zabbix/zabbix_server.log
```

INSTALL ZABBIX IN 5 MINUTES

Frontend settings

- Fill your: Frontend URL

```
wget https://dl.google.com/linux/direct/google-chrome-stable_current_x86_64.rpm  
dnf localinstall google-chrome-stable_current_x86_64.rpm
```

The screenshot shows the 'initMAX' application interface for Zabbix configuration. On the left is a dark sidebar with navigation links: Dashboards, Monitoring, Services, Inventory, Reports, Data collection, Alerts, Users, Administration (selected), and General. The main area is titled 'Other configuration parameters'. It contains several configuration fields:

- Frontend URL: `https://www.initmax.cz/zabbix/`
- * Group for discovered hosts: `Discovered hosts` (with a 'Select' button)
- Default host inventory mode: `Disabled` (radio button selected)
- User group for database down message: `Zabbix_Super_Admins` (with a 'Select' button)
- Log unmatched SNMP traps:
- Authorization**
 - * Login attempts: `5`
 - * Login blocking interval: `30s`
- Storage of secrets**
 - Vault provider: `HashiCorp Vault` (selected)
 - `CyberArk Vault` (button)
- Security**
 - Validate URI schemes:
