# Windows installation methods

## Windows software distribution technologies

- › GPO
- › SCCM
- › Microsoft Intune
- › PowerShell Scripts
- › Custom software solution
- › Ansible – why not?

1

Ansible

# What is Ansible?

- › **Open Source solution**
- › **Agentless Automation Engine**
  - › Automates IT tasks without requiring any software or agents installed on target nodes.
- › **Infrastructure as Code (IaC)**
  - › Uses simple, human-readable YAML syntax (Playbooks) to define and manage system configurations.
- › **Versatile & Powerful**
  - › Excels at configuration management, application deployment, and complex multi-tier orchestration.
- › **Secure & Efficient**
  - › Connects via standard SSH (Linux) or WinRM (Windows), ensuring low overhead and high security.
- › **Predictable & Reliable**
  - › Features an idempotent design, ensuring that systems reach the desired state regardless of their starting point.

# Ansible Building Blocks

## › Inventory

- › The "Where" – A list or file (INI/YAML) containing the IP addresses or hostnames of the servers you want to manage, organized into groups.

## › Tasks

- › The "What" – The smallest unit of action, calling a specific module (e.g., apt, copy, or service) to perform a single operation on a host.

## › Playbooks

- › The "How" – High-level YAML files that map your Inventory to a set of Tasks, defining the execution order and logic.

## › Roles

- › The "Package" – A standardized directory structure used to group related tasks, variables, and files (e.g., a "Webserver" role) for easy reuse across different projects.

## › Modules

- › The "Tools" – Built-in specialized programs (like tools in a toolbox) that Ansible executes on the target system to do the actual work.

# Ansible Best Practices

- › **Version Control Everything**

- › Keep all your Playbooks, Inventories, and Roles in Git to track changes and enable team collaboration.

- › **Keep It Simple (KISS)**

- › Focus on readability; if a task is too complex for YAML, move the logic into a custom script or module.

- › **Leverage Roles & Galaxy**

- › Don't reinvent the wheel—use Ansible Galaxy for community-proven roles and organize your own code into reusable roles.

- › **Secure Sensitive Data**

- › Never store plain-text passwords; use Ansible Vault to encrypt secrets, API keys, and certificates.

- › **Name Everything Clearly**

- › Give every "play" and "task" a descriptive name; it serves as live documentation and makes debugging much faster.

Windows Ansible module

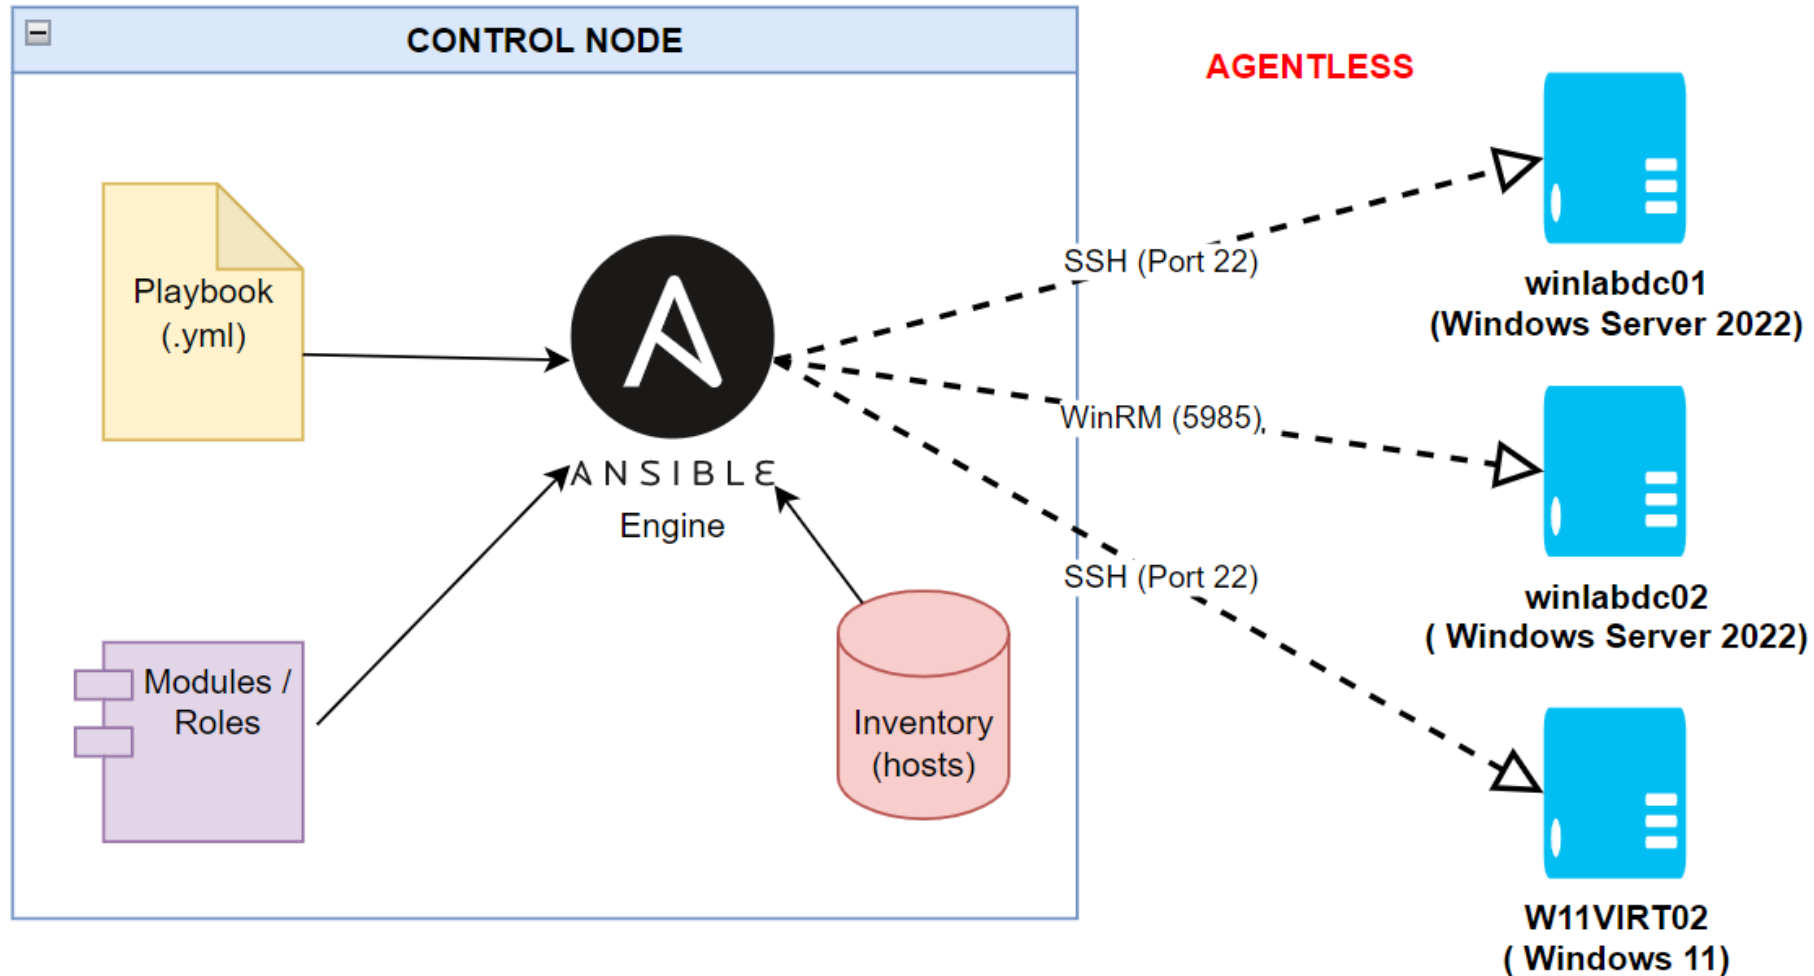

Zabbix agent install with Ansible on Windows

# Windows and Ansible

- › Ansible on Windows – why Not?
- › [https://docs.ansible.com/projects/ansible/latest/os\\_guide/intro\\_windows.html](https://docs.ansible.com/projects/ansible/latest/os_guide/intro_windows.html)
- › [https://docs.ansible.com/projects/ansible/latest/os\\_guide/windows\\_ssh.html](https://docs.ansible.com/projects/ansible/latest/os_guide/windows_ssh.html)
- › [https://docs.ansible.com/projects/ansible/latest/os\\_guide/windows\\_winrm.html](https://docs.ansible.com/projects/ansible/latest/os_guide/windows_winrm.html)

# Ansible simple setup

# Ansible folder structure

► Folder structure:

```
ansible
|- inventory
|- playbooks
|- roles
|- ansible.cfg
```

## Zabbix agent install with Ansible on Windows

# Inventory

### ► Webinar lab inventory:

```
ansible
|- inventory
|- hosts
```

```
[lab_servers]
winlabdc02.lab.local ansible_connection=winrm ansible_host=winlabdc02.lab.local
ansible_host_IP=10.1.1.52

[lab_workstations]
winlabdc01.lab.local ansible_connection=ssh ansible_host=10.1.1.51 ansible_host_IP=10.1.1.51

W11VIRT02 ansible_connection=ssh ansible_host=10.1.1.19 ansible_shell_type=powershell
ansible_host_IP=10.1.1.19
```

# Ansible Install Task

## ► Group vars:

```
---
zabbix_agent2_zabbix_server: "10.1.1.165"
zabbix_agent2_install_path: 'c:\temp\'zabbix_agent2.msi'
```

## ► Install msi package task

```
---
# tasks file for zabbix-agent2

- name: Ensure Zabbix agent 2 is installed through win_package
  win_package:
    path: "{{ zabbix_agent2_install_path }}"
    arguments: SERVER="{{ zabbix_agent2_zabbix_server }}" SERVERACTIVE="{{ zabbix_agent2_zabbix_server }}"
    state: present
```

## Zabbix agent install with Ansible on Windows

# Zabbix agent config file

### ► Generate config file from j2 template

```
# This is a configuration file for Zabbix agent 2 (Windows)
# To get more information about Zabbix, visit http://www.zabbix.com

LogFile=C:\Program Files\Zabbix Agent 2\zabbix_agent2.log
Server="{{ zabbix_agent2_zabbix_server }}"
ServerActive="{{ zabbix_agent2_zabbix_server }}"
#Hostname=
Timeout=20

Include=C:\Program Files\Zabbix Agent 2\zabbix_agent2.d\
Include=C:\Program Files\Zabbix Agent 2\zabbix_agent2.d\plugins.d\*.conf
UnsafeUserParameters=1
ControlSocket=\\.\pipe\agent.sock
AllowKey=system.run[gupdate *,*]
DenyKey=system.run[*]
Include=.\zabbix_agent2.d\plugins.d\*.conf
```

# Ansible config Task

## ► Apply config template and restart agent

```
- name: "Render Zabbix agent 2 main config file"
  ansible.builtin.template:
    src: zabbix_agent2.j2
    dest: c:\Program Files\Zabbix Agent 2\zabbix_agent2.conf

- name: Restart a service Zabbix Agent 2
  win_service:
    name: Zabbix agent 2
    state: restarted
```

3

# Configuring Windows Environment

Zabbix agent install with Ansible on Windows

# Windows Environment

## Windows Environment

- › Workgroup
- › Domain
- › Cloud

## Ansible connectivity

- › Windows Remote Management - winrm
- › PowerShell Remoting over WinRM - psrp
- › SSH - ssh

4

Ansible via ssh

# Windows SSH

## Workstations

- › Windows 11: All versions (Home, Pro, Enterprise).
- › Windows 10: Since 1803 (April 2018 Update) and newer.

## Servers

- › Windows Server 2019: First native supported version.
- › Windows Server 2022: Full support
- › Windows Server 2025: Full support

# Windows SSH

## ► SSH service configuration

```
# Installation
Add-WindowsCapability -Online -Name OpenSSH.Server~~~~0.0.1.0

# Service start
Start-Service sshd

# Service setup
Set-Service -Name sshd -StartupType 'Automatic'

# Firewall setup
Get-NetFirewallRule -Name *OpenSSH-Server* | select Name, Enabled
```

## Zabbix agent install with Ansible on Windows

# SSH

### ▶ SSH default shell setup ( powershell )

```
# Set default to powershell.exe
$shellParams = @{
    Path          = 'HKLM:\SOFTWARE\OpenSSH'
    Name          = 'DefaultShell'
    Value         = 'C:\Windows\System32\WindowsPowerShell\v1.0\powershell.exe'
    PropertyType  = 'String'
    Force         = $true
}
New-ItemProperty @shellParams

# Set default back to cmd.exe
Remove-ItemProperty -Path HKLM:\SOFTWARE\OpenSSH -Name DefaultShell
```

Zabbix agent install with Ansible on Windows

# SSH – Start playbook

▶ Start playbook via ssh:

```
ansible-playbook playbooks/zabbix-agent2.yml -i inventory/hosts -l  
winlabdc01.lab.local --check --diff -u administrator@lab.local -k
```

5

Ansible via winRM

# WinRM

- › [https://docs.ansible.com/projects/ansible/latest/os\\_guide/windows\\_winrm.html](https://docs.ansible.com/projects/ansible/latest/os_guide/windows_winrm.html)
- › <https://learn.microsoft.com/en-us/windows/win32/winrm/installation-and-configuration-for-windows-remote-management>

```
Winrm quickconfig  
winrm get winrm/config  
winrm enumerate winrm/config/listener
```

Zabbix agent install with Ansible on Windows

# GPO winRM Configuration

► Enable service:

|                                                                     |                          |
|---------------------------------------------------------------------|--------------------------|
| Computer Configuration (Enabled)                                    |                          |
| Policies                                                            |                          |
| Windows Settings                                                    |                          |
| Security Settings                                                   |                          |
| System Services                                                     |                          |
| Windows Remote Management (WS-Management) (Startup Mode: Automatic) |                          |
| Permissions                                                         | No permissions specified |
| Auditing                                                            | No auditing specified    |

# GPO winRM Configuration

## ► Configure service:

Computer Configuration (Enabled)

Policies

Windows Settings

Administrative Templates

Policy definitions (ADMX files) retrieved from the central store.

Windows Components/Windows Remote Management (WinRM)/WinRM Service

| Policy                                       | Setting  |
|----------------------------------------------|----------|
| Allow Basic authentication                   | Disabled |
| Allow remote server management through WinRM | Enabled  |

IPv4 filter:

IPv6 filter:

Syntax:

Type "\*" to allow messages from any IP address, or leave the field empty to listen on no IP address. You can specify one or more ranges of IP addresses.

Example IPv4 filters:

2.0.0.1-2.0.0.20, 24.0.0.1-24.0.0.22

\*

Example IPv6 filters:

3FFE:FFFF:7654:FEDA:1245:BA98:0000:0000-3FFE:FFFF:7654:FEDA:1245:BA98:3210:4562

\*

| Policy                                        | Setting |
|-----------------------------------------------|---------|
| Allow unencrypted traffic                     | Enabled |
| Specify channel binding token hardening level | Enabled |

Hardening Level:

Relaxed

# Authentication

- ▶ Ansible authentication matrix
- ▶ Linux Kerberos Configuration – krb5.conf

| Option      | Local Accounts | Active Directory Accounts | Credential Delegation | HTTP Encryption |
|-------------|----------------|---------------------------|-----------------------|-----------------|
| Basic       | Yes            | No                        | No                    | No              |
| Certificate | Yes            | No                        | No                    | No              |
| Kerberos    | No             | Yes                       | Yes                   | Yes             |
| NTLM        | Yes            | Yes                       | No                    | Yes             |
| CredSSP     | Yes            | Yes                       | Yes                   | Yes             |

Zabbix agent install with Ansible on Windows

# winRM – Start playbook

► Start with winRM connection:

```
#get Kerberos ticket
kinit administrator

#List Kerberos ticket
Klist

#Start playbook
ansible-playbook playbooks/zabbix-agent2.yml -i inventories/LoZa_lab/hosts -l
winlabdc02.lab.local --check --diff
```

# Secure Communication

- ▶ Default winRM listener – HTTP port 5895
  - ▶ Communication without tls
- ▶ Secure winRM listener – HTTPS port 5896
  - ▶ PKI infrastructure
  - ▶ Local certificates for https endpoint
  - ▶ Secure listener configuration

# Secure Communication

## ► Secure listener configuration:

```
winrm quickconfig -transport:https
winrm enumerate winrm/config/listener
```

### Listener

```
Address = *
Transport = HTTPS
Port = 5986
Hostname = PCADMIN.zschynov.zschynov
Enabled = true
URLPrefix = wsman
CertificateThumbprint = d9 4d 54 29 f4 ba f1 e6 f7 dc f8 bf 26 6c 84 c5d0 7e 9b 57
ListeningOn = 127.0.0.1, 192.168.1.109
```

6

Zabbix collection

# Zabbix collection - Community.Zabbix

► <https://docs.ansible.com/projects/ansible/latest/collections/community/zabbix/index.html>

```
- name: Create a new host or update it
  vars:
    ansible_user: "Admin"
    ansible_httpapi_pass: "zabbix"
    ansible_network_os: community.zabbix.Zabbix
    ansible_connection: httpapi
  delegate_to: "{{ zbx_agent_zbx_gui_address }}"
  community.zabbix.zabbix_host:
    host_name: "{{ ansible_facts.hostname }}"
    host_groups:
      - "{{ zbx_agent_zbx_gui_hostgroup }}"
    link_templates: "{{ zabbix_agent_host_templates_list }}"
```
